

CRUK-DSS Installation - Brief Summary

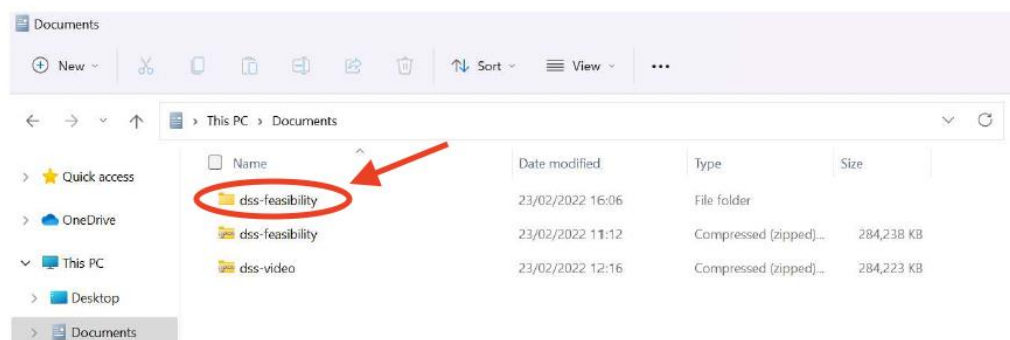

1. Download the CRUK DSS on [this page](#) (corresponding to the study you are part of)

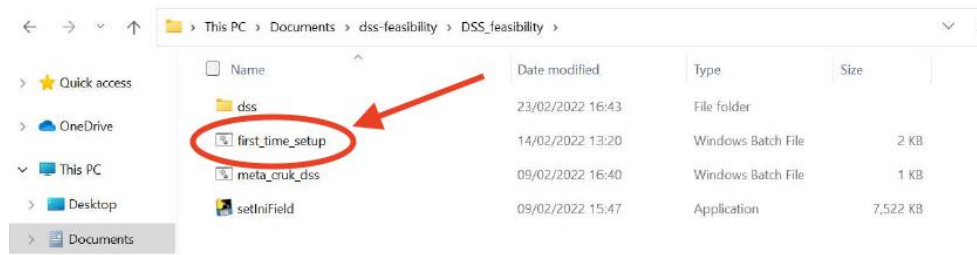

2. Go to the directory in which you have downloaded the zip archive of the DSS

3. Unzip the file. If using the Windows uncompressing facility, use the "Extract here" or "Extract All" option and default parameters proposed. You will now have another file in the same folder.

4. Double-click on this new file. In it, you will find another file with a similar name. Double-click on it. You should now see 4 elements in the folder: a folder called dss, a file called first time setup.bat, a file called meta_cruk_dss.bat and a file called setIniField.exe.

5. **Double-click on the `first_time_setup.bat` file.** You should see the screen below. Wait until the black command line window closes on its own. You are now ready to move to the configuration steps in SystmOne.
